Education

Michigan State University **May 2027**
Bachelor of Science in Computer Science, 3.98 *East Lansing, MI*

Experience

Student Software Engineer **Dec 2024 – Present**
Infrastructure Planning and Facilities, Michigan State University *East Lansing, MI*

- Modernizing the bill approval and **payment-processing** workflow by replacing a legacy application with a maintainable full-stack **C#/React** system, built with **Codex** as an AI development tool

Software Quality Assurance Engineer Intern **May 2026 – August 2026**
Hudl *Lincoln, NE*

- Improved CI reliability by maintaining a GitHub Actions **Playwright** dispatch runner, and enforced standards through **code reviews** and **exploratory testing**, developing with **Claude Code**
- Cut QA regression time by **10%** and eliminated recurring failures by debugging and fixing **50+** flaky **Vitest** tests, and extended testing to the **GraphQL** API layer with new test suites

Software Engineer Intern **May 2025 – August 2025**
Health Enhancement Systems *Midland, MI*

- Enabled employees to create, preview, and approve **500+** localized content pieces by integrating **MCP servers** and **context engineering** into a full-stack **ReactJS/MySQL** translation management system
- Automated stale link detection across wellness apps with **Ruby on Rails** jobs featuring **parallelized** link testing and daily scheduled runs, integrated into **Octopus Deploy** with **structured logging** for operational visibility

Industry Projects

AI Mock Interview Platform | *Amazon-Sponsored Capstone* **Aug 2026 – Present**

- Scoring spoken **STAR-method** responses in real time by architecting an **LLM agent** on **AWS Strands/AgentCore** as an automated judge, fed by **Amazon Transcribe**
- Validating LLM judging accuracy against a scoring rubric and guarding against **prompt injection** by building an **evaluation harness** of human-scored sample answers
- Delivering low-latency feedback and durable session state with a serverless **AWS Lambda**, **API Gateway**, **DynamoDB**, and **S3** backend, built with a **5-person** team and **Amazon** sponsor engineers

Multi-Tenant CRM Backend | *Team Lead, Waggoner Financials via Imagine Software Club* **Feb 2026 – May 2026**

- Architected a fault-tolerant **Go** microservice backend for a multi-tenant mobile **CRM** on **EC2**, leading the team's design decisions
- Enabled non-blocking contact processing with per-tenant business rules by building an **asynchronous ingestion pipeline** on a **Redis job queue**

Legal Citation Hallucination Detector | *ProseAI, via Break Through Tech* **Sep 2026 – Present**

- Detecting hallucinated legal citations in AI-generated documents by building an **NLP** pipeline with citation parsing, existence checking, and **semantic similarity**
- Minimizing missed hallucinations by evaluating with **precision**, **recall**, and **F1** on a labeled benchmark of **200 documents**, prioritizing recall on fabricated citations
- Preventing regressions by packaging findings into a categorized **failure taxonomy** and an open-source **Python** regression suite for ProseAI

Projects

Resume Customizer Extension | *Fast API, pgvector, React, supabase*

- Cut resume-tailoring time by **90%** (30 min → 3 min) with a **FastAPI** pipeline combining **pgvector/Supabase** semantic search, knapsack-based content selection, and an iterative **Claude**-powered **refinement loop**

Technical Skills

Technologies: Python, Go, TypeScript, JavaScript, Java, C#, C++, SQL, Ruby, HTML/CSS, MySQL, Firebase, Supabase
Frameworks: ReactJS, NodeJS, Rails, Spring Boot, Flask, AngularJS, VueJS, React Native
Other Tools: AWS, GitHub Actions, Git, Linux, Grafana, Jira, Azure, Google Cloud

Certification

Cornell University, online certification in Machine Learning Foundations **August 2026**
via Break Through Tech
